	VDLUSIA CDUNTY (SEE DAYTDNA BEACH SMSA, TABLE 6)													

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

⁴The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities: 1972 and 1967—Continued

(Footnotes for table 4)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing area are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where establishments records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (0) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown were administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967—Continued

(Footnotes for table 5)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (0) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees 88--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

- Represents zero. (Z) Less than half of the unit of measurement, shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definition of Standard Metropolitan Statistical Area (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹This SMSA was retitled in 1972; however, the definition was unchanged.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year ¹	Establishments		All employees		Production workers			Value added by manu- facture	Cost of materials	Value of shipments	Capital expendi- tures, new	Comparative indexes and U.S. employment			
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages					Percent of U.S. employment	Index of employment change	United States	
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(1958=100)	Index of employment change (1958=100)	Employees (1,000)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown were administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was retitled in 1972; however, the definition was unchanged.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967—Continued

(Footnotes for table 5)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

*General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical areas (SMSA) in this State.

-- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was retitled in 1972; however, no change in definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Ind. code	County ¹ and industry	1972										1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume IIL, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

⁴The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967—Continued

(Footnotes for table 7)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972

20 Food and kindred products
21 Tobacco manufactures
22 Textile mill products
23 Apparel and other textile products
24 Lumber and wood products
25 Furniture and fixtures
26 Paper and allied products
27 Printing and publishing
28 Chemicals and allied products
29 Petroleum and coal products
30 Rubber and plastics products, n.e.c.
31 Leather and leather products
32 Stone, clay, and glass products
33 Primary metal industries
34 Fabricated metal products
35 Machinery, except electrical
36 Electrical equipment and supplies
37 Transportation equipment
38 Instruments and related products
39 Miscellaneous manufacturing industries
CAO Central administrative offices

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹This SMSA changed definition for 1972, affecting the data by 5 percent or less. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA changed definition for 1972. Historical data prior to 1972 are based on prior census year definitions.

Notes: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(D) Withheld to avoid disclosing figures for individual companies.

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

*The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

--	ADMINISTRATIVE AND AUXILIARY	71	29	3.5	42.9	-	-	-	-	-	-	-	1.8	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

--	ADMINISTRATIVE AND AUXILIARY . . .	14	8	1.1	15.4	-	-	-	-	-	-	-	.8	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³This SMSA was defined after the 1967 census.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

TABLE 6. General Statistics by Industry for Standard Metropolitan Statistical Areas: 1972 and 1967—Continued

(Footnotes for table 6)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³This SMSA was defined after the 1967 census.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹This SMSA was defined after the 1967 census; no historical data are available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

**TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:
1972 and Earlier Years**

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

- Represents zero. (NA) Not available.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Parishes, and Selected Cities: 1972 and 1967—Continued

(Footnotes for table 4)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹This SMSA was defined after the 1967 census; no historical data are available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was defined after the 1967 census; no historical data are available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

TABLE 7. General Statistics by Industry Group for Selected Parishes: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Notes: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

20 Food and kindred products	25 Furniture and fixtures	30 Rubber and plastics products, n.a.c.	35 Machinery, except electrical

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(D) Withheld to avoid disclosing figures for individual companies.

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State: 1972 and Earlier Years

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufacture volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

- Represents zero. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 99 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year ¹	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment			
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages					Percent of U.S. employment	Index of employment change	United States	
	(number)	(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(1958=100)	Index of employment change (1958=100)	Employees (1,000)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (S) Withheld because the data did not meet publication standards.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

^aThe definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available.

*The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas:
1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities and Towns:
1972 and 1967—Continued

(Footnotes for table 4)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹This SMSA was defined after the 1967 census.²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year ¹	Establishments		All employees		Production workers			Value added by manu- facture	Cost of materials	Value of shipments	Capital expenditures, new	Comparative indexes and U.S. employment

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

⁴The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was defined after the 1967 census.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967—Continued

(Footnotes for table 5)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percentE3--30 to 39 percent
E4--40 to 49 percentE5--50 to 59 percent
E6--60 to 69 percentE7--70 to 79 percent
E8--80 to 89 percentE9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

--	ADMINISTRATIVE AND AUXILIARY. . . .	53	31	8.3	117.7	-	-	-	-	-	-	-	6.5	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was defined after the 1967 census.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

TABLE 8. General Statistics by Industry Group for Selected Cities: 1972 and 1967

(Separate industry group data are shown for all major industry groups with 450 employees or more within a city except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

²This SMSA was defined after the 1967 census; no historical data are available.

TABLE 2. General and Comparative Statistics for the State and Selected Standard Metropolitan Statistical Areas: 1972 and Earlier Years

(Selected standard metropolitan statistical areas include those with 40,000 manufacturing employees or more)

Year ¹	Establishments		All employees		Production workers			Value added by manu- facture	Cost of materials	Value of shipments	Capital expendi- tures, new	Comparative indexes and U.S. employment			
	Total	With 20 employees or more	Number	Payroll	Number	Man-hours	Wages					Percent of U.S. employment	Index of employment change	United States

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (S) Data does not meet publication standards.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

²This SMSA was defined after the 1967 census.

TABLE 5. General Statistics by Industry Group and Industry: 1972 and 1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

²This SMSA was defined after the 1967 census; no historical data are available.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 450 employees or more within a county except those that would disclose figures for individual companies)

Ind. code	County ¹ and industry	1972										1967

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Data for counties that are cointensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

Footnotes continued on next page.

TABLE 6. General Statistics by Industry for Standard Metropolitan Statistical Areas: 1972 and 1967—Continued

(Footnotes for table 6--Continued)

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

TABLE 7. General Statistics by Industry Group for Selected Counties: 1972 and 1967

(Separate industry group data are shown for all industry groups with 45D employees or more within a county except those that would disclose figures for individual companies)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available.

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

(NA) Not available.

(D) Withheld to avoid disclosing figures for individual companies.

Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was defined after the 1967 census.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

--	ADMINISTRATIVE AND AUXILIARY. . .	215	114	26.4	333.9	-	-	-	-	-	-	-	21.4	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹This SMSA was defined after the 1967 census.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

EXPENDITURES FOR PLANT AND EQUIPMENT, TOTAL00 .	84.4	1.6	70.3	.9
NEW PLANT AND EQUIPMENT, TOTAL00 .	75.8	1.6	68.9	.8
NEW STRUCTURES AND ADDITIONS TO PLANT00 .	22.7	.4	26.5	.2
NEW MACHINERY AND EQUIPMENT00 .	53.1	1.2	42.4	.6
USED PLANT AND EQUIPMENT00 .	8.6	-	1.4	(2)

- Represents zero. (2) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities: 1972 and 1967

Standard metropolitan statistical area, county, and city	1972											1967	
	Establishments		All employees		Production workers			Value added by manuf- acture	Cost of materials	Value of shipments	Capital expendi- tures, new	All employees	Value added by manuf- acture

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 49 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over
